Accessories

This page lists the **accessories** available for the MCSS linear slides.

Sensor switch

The sensor switch is used for position detection and end-of-travel.

Maglift - Magnetic spring for vertical counterbalance

The Maglift magnetic spring counterbalances the load in vertical applications, keeping the linear slide stable when the motor is not powered.

How to choose the accessories

- Use the sensor switch for position detection and safety. - Use the Maglift for vertical counterbalance when the load must not fall. - The accessories are matched to the linear slide size; refer to the ordering code page. - For the mounting and the selection, refer to the installation manual.
