Linear Slide Deflection - Preliminary

This page shows the **deflection** of the MCSS linear slide. The deflection is given for the roll, yaw, and pitch directions; the values are preliminary and depend on the load and the mounting.

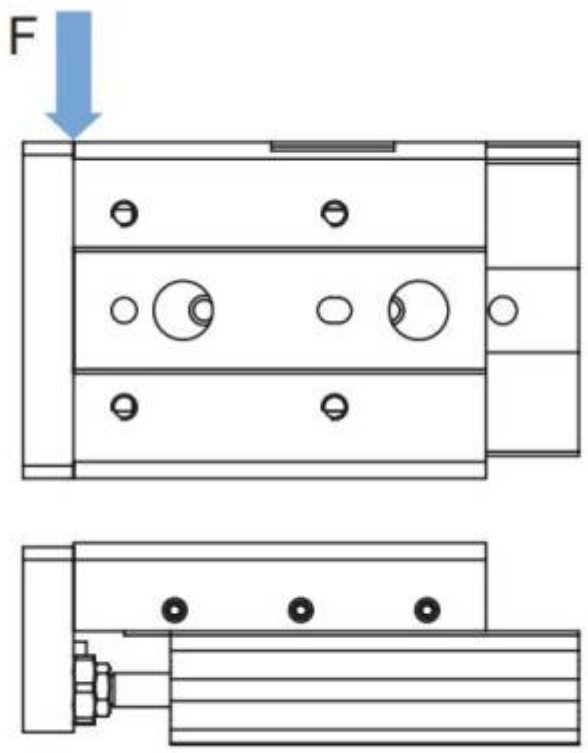

Roll deflection

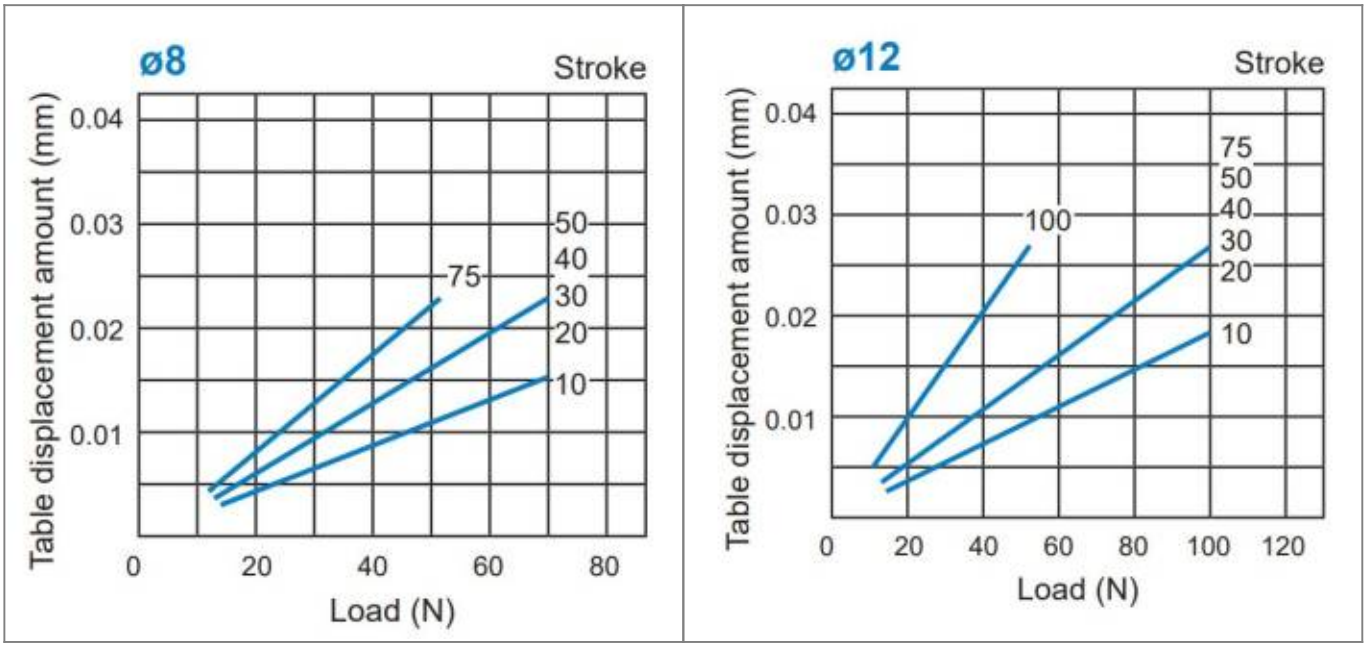

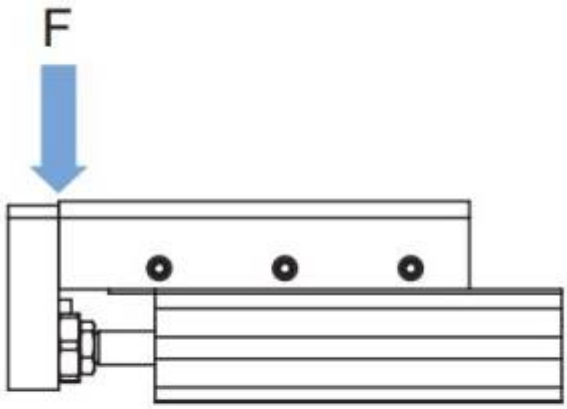

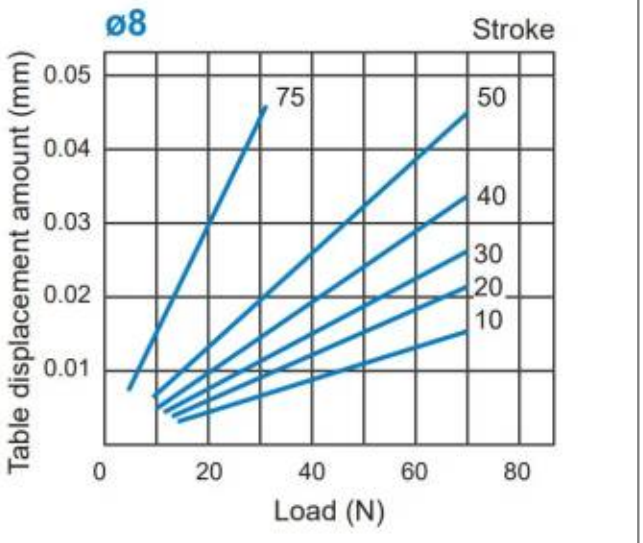

Yaw deflection

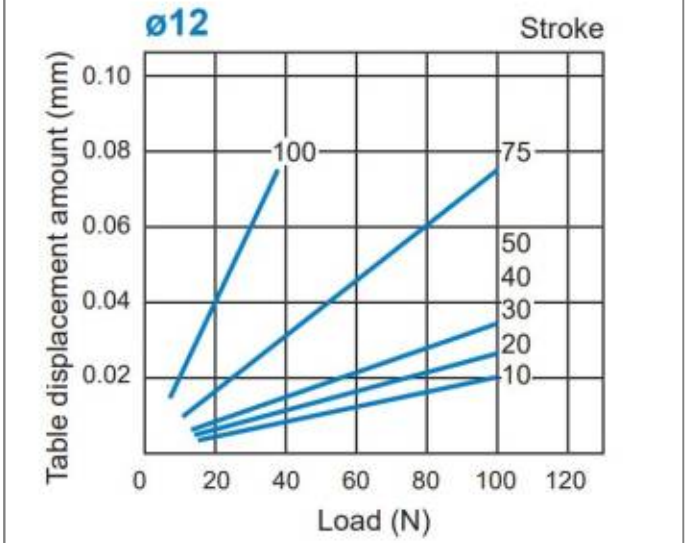

Pitch deflection

Notes

- The deflection is shown for the roll, yaw, and pitch directions. - The values are preliminary; verify against the application load and the mounting stiffness. - Keep the deflection within the application tolerance for the required accuracy. - Refer to the mechanics page for the construction and to the performance page for the ratings.
