Servo Drive Compatilibity

Green Drive ISO tubular linear motors are 3-phase standard brushless linear servo motors able to be controlled by standard servo drives on the market. 2.5KV tested insulation capability ensures that the motor can be controlled by 3x480VAC drives, 2x230VAC drives or low voltage servo drives.

All our linear motors are delivered with a cable kit (power and signal), just ready for the connection to the drives which are available on the market today. All our cables are robotic type with lengths on request or with standard length of 5 meters.
